CREATING A DIGITAL LIVING ROOM PLAY EXPERIENCE

The BarrelEye team is working with Electronic Arts to create a connected living room play experience using smart TVs, phones, and tablets. We are exploring the viability of the multi-device platform for interactive game content, and examining what it means to bring multi-screen gaming into the living room space.

To that end we are developing “Torch,” a game about being lost in your own living room. In “Torch,” players use a local view on their phones to light torches and illuminate a dark dungeon on the TV screen. Our hope is to have our project on display at the 2013 Consumer Electronics Show, where it can light the public’s imagination about the possibilities of a connected living room.
